

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 4/1/04 and 3/31/05.

For comparison purposes, the following shows the Midwest Electric Power Industry averages for sources of electricity generation and emissions for 2001*. 78 percent of ComEd's electricity is generated by nuclear power, and another 1 percent is generated by natural gas-fired power. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 68% less than the Midwest Electric Power Industry average for carbon dioxide, 81% less for nitrogen oxides, and 92% less for sulfur dioxide.

(Midwest Electric Power Industry Sources—rounded to the nearest whole percent)

Coal-fired power	70%
Hydro power	less than 1%
Natural gas-fired power	4%
Nuclear power	24%
Oil	less than 1%
Renewables	1%
(includes geothermal, biomass, wind, solar, thermal and photovoltaics)	

(Midwest Electric Power Industry Emissions—pounds per 1,000 kilowatt-hours)

Carbon dioxide	1,573.57 lbs.
Nitrogen oxides	5.29 lbs.
Sulfur dioxide	14.03 lbs.

ComEd Brings Solar Energy To Millennium Park

The Exelon Pavilion at 201 E. Randolph Street houses the Millennium Park Welcome Center that opened during Earth Month (April) 2005. The exterior walls of the Exelon Pavilions are covered in solar panels. The solar panels generate energy for the buildings and include an interactive web-based display that identifies Chicago solar installation locations.

During opening ceremonies for the Millennium Park Welcome Center and the Exelon Pavilions, the U.S. Department of Energy presented to ComEd and to the City of Chicago plaques acknowledging their longstanding support of its nationwide Million Solar Roofs initiative. With the completion of the four Exelon Pavilions, solar installations in Chicago reached over one-megawatt or enough solar energy to power approximately 150 homes.

Peter Dreyfuss, Midwest Regional Director of the U.S. Department of Energy, presents Frank Clark, Exelon Executive Vice President and ComEd President, with a plaque acknowledging ComEd's longstanding support of the Million Solar Roofs Initiative.

Environmental Disclosure Information

Twelve Months Ending March 2005

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Admn. Code 421.

Sources of Electricity Supplied for the 12 months ending March 31, 2005	Percentage of Total
Biomass power	1%
Coal-fired power	20%
Hydro Power	0%
Natural gas-fired power	1%
Nuclear power	78%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	0%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending March 31, 2005

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWh) PRODUCED from KNOWN Sources for the 12 months ending March 31, 2005	
Carbon dioxide	507.2 lbs.
Nitrogen oxides	1.0 lbs.
Sulfur dioxide	1.1 lbs.
High level nuclear waste	0.008 lbs.
Low level nuclear waste	0.0007 cubic feet

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site www.icc.state.il.us.
